PROJECTS

Journey Joy — Ride-Hailing Platform

SECURITY · PRODUCTION

Inherited a production ride-hailing codebase and took it to launch, contributing 372 of its 381 commits. Removed a MASTER_OTP backdoor that let one universal code unlock any account, fixed two broken-object-level-authorization flaws, closed unauthenticated path traversal, verified Paymob callback HMACs, moved S3 objects behind presigned reads, added per-IP and per-account rate limiting, and executed a verified purge of 43 customers' personal data from git history.

- Grew the internal app from a single showroom tool into a company-wide superapp used daily by 300+ staff across 15 branches.
- Worked across a multi-module Flutter app (orders, catalogs, analytics, bonus tracking); cut catalog loads from 10–15s to under 3s on a 160,000-item catalog.
